SpeechExec Enterprise

Your tailored dictation workflow solution

A powerful tool for all Connecting teams and offices

Philips SpeechExec Enterprise is a perfect fit for customers preferring a tailor-made dictation workflow solution. It is ideal for companies with several office locations and a medium to large user base.

The dictation management software features central administration, allowing IT managers to be in full control of the entire dictation workflow at all times. They can install SpeechExec Enterprise through silent setup and then administer and help users remotely, reducing the need for local support. Even Philips dictation hardware and the Philips Voice Recorder app can be remotely administrated with the optional Remote Device Manager module.

Authors have various choices to dictate. They can stay with their familiar digital voice recorders, record with the Philips Voice Recorder app on their smartphone or even use third party devices. On demand speech recognition for general vocabulary and transcription service for even complex recordings, add additional flexibility to the solution and reduce turnaround times.

Assistants see all assigned dictations at a glance and can simply start typing by connecting a foot control and headset to the PC. If authors use speech recognition, only corrections need to be done and documents can be sent back almost immediately.

Philips SpeechExec Enterprise is customizable to your specific needs, supports state-of-the-art technologies (e.g. Citrix, Windows Terminal Services, VMware) and can be connected to your HIS/DMS solution via an interface. SpeechExec Enterprise evolves with you when your requirements change, so you are geared for the future.

Your tailored workflow solution

SpeechExec Enterprise brings it all together and lets you choose how to dictate.

Solution components and benefits

Standard modules

SpeechExec Enterprise Dictate for authors

Record your voice with your Philips PocketMemo or SpeechMike microphone and send it to the dictation software. Tag your dictation with additional information, such as priority, confidential settings, preferred transcriptionist, index markers, document type data (e.g. patient or case number). View your dictations and their progress in your personal worklist.

SpeechExec Enterprise Transcribe for transcriptionists

View your assigned dictations in your personal worklist. See additional information added by the author, such as priority, patient or client number. Start transcribing the requested documents and return them when you are ready. In case of speech recognition usage, finalize and format the document.

SpeechExec Enterprise Web Access for authors and transcriptionists

Enjoy location independent working from any computer, e.g. when working from home or a during business trip. Web access allows you to be independent from your office equipment and local software installations. You can upload dictations from voice recorders and transcribe them using a Philips foot control. Access can easily be granted to external employees if needed.

SpeechExec Enterprise Manager for IT administrators

Manage user settings, job information settings, licenses centrally and use Microsoft's Active Directory services to simplify administration.

SpeechExec Licence Server for IT administrators

Manage licencing centrally and benefit from a concurrent licensing model, which makes the solution very cost effective.

Additional modules

Mobile Service for authors

Dictate and send dictations securely from your smartphone to your work list in SpeechExec Enterprise. Use speech recognition to turn recordings into text immediately and check the status of your dictations directly on your phone.

Workflow Manager for IT administrators

Set up work workflow automation for moving, copying, and deleting dictation files. Notifications for pending work ensure that dictations are reliably processed.

Statistics Module for IT administrators

Receive comprehensive statistics on dictations processed, transcription turnaround and job status to analyze and optimize workload and document workflow. Reports can be easily exported.

Remote Device Manager for IT administrators

Easily manage company wide user settings, firmware updates, and backup and restore operations of all Philips dictation hardware and Philips voice recorder apps in one place. Set up new devices remotely in no time.

Philips Speech Recognition Service powered by SpeechLive

Initiate speech recognition directly from the Philips voice recorder app, through web access or on your PC and instantly receive a transcribed document. This pay-as-you-go service supports general terminology and is ideal for those who don't work with speech recognition daily.

Nuance Speech Recognition Interface

Use Nuance Dragon Professional, Legal or Medical with your SpeechExec Enterprise solution and benefit from even higher accuracy thanks to industry-specific terminology. You can also add your own vocabulary to the solution. Front-end, back-end and server-based speech recognition are supported.

Why choose SpeechExec Enterprise?

Intuitive use

Easy to use solution for authors, transcriptionists and IT administrators.

All-in-one solution

Combines hardware, software, apps, additional modules and services in one secure and stable install.

Modular structure

Customizable system based on your current and possible future needs to perfectly suit your organization and setup.

Support from the #1

We are the #1 in professional dictation for the last 60 years and train a world-wide network of certified partners for project management, implementation, training and support.

Always up-to-date

Latest software updates and support guaranteed through transparent maintenance contracts.

Resource management

Transparent and projectable workload management saves time and frees up capacities.

Current technology

Guaranteed long-term support of Citrix, virtual terminal services, WTS and MS Active Directory.

Central administration

Software and hardware configuration, setup and maintenance are managed through your IT administrator.

Third party application interfaces

Multiple integration options with digital document management and hospital information systems.

Cost effective investment

Concurrent user licensing saves costs and dictations can be created without additional hardware from smartphones or any existing voice recorders.

Flexible and secure setup

Install SpeechExec Enterprise on premise or in your private cloud data center.

Speech Recognition

Speech recognition can be added easily and cost efficiently any time.
