Make the most of your solution

with remote device management

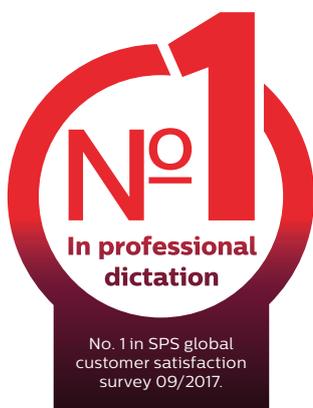

The Philips Remote Device Management Software allows administrators to centrally configure professional Philips dictation and transcription devices. The convenient remote management saves valuable time and resources for administrators, and simplifies their work process.

Enhance your productivity

- Central configuration and management of devices saves time and resources
- Automatic firmware updates for a unified device structure
- Remote backup and reset of settings for hassle-free device setup

Designed for professionals

- Support of virtual environments for reduced costs and improved accessibility
- Client-server architecture for easy central administration
- Free version available for risk-free solution testing

No. 1 in SPS global customer satisfaction survey 09/2017.

Highlights

Central configuration of hardware

The Philips Remote Device Management Software conveniently manages Philips professional dictation and transcription devices as well as the Philips Voice Recorder App for iOS and Android. Administrators easily assign device configurations to users, device types, and even individual units.

Automatic firmware updates

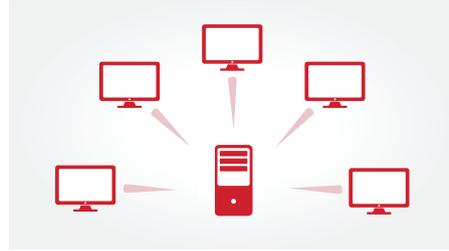

Easily update the firmware for SpeechAir, PocketMemo, and SpeechMike in one operation. An update notification is sent to all users once a new firmware file is centrally defined by the administrator.

Remote reset of settings

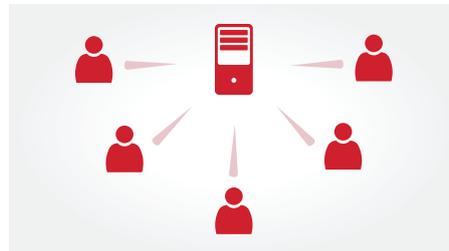

Administrators can quickly back up and restore individual user settings of Philips dictation devices.

Support of virtual environments

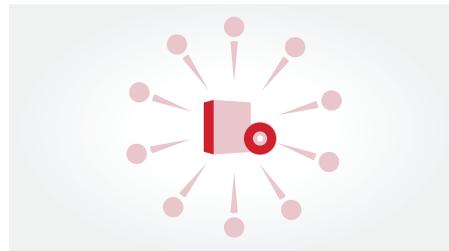

The Philips Remote Device Management Software can also be used in Citrix, Microsoft WTS/RDS and VMware Horizon View environments.

Client-server architecture

The Philips Remote Device Management Software uses a client-server architecture. The server manages data storage, takes care of transactions, coherency and multi-user environment. The client updater application runs in the background, continually updating device configurations. It downloads and maintains a list of all individual device configurations.

Free version

A free version of the Philips Remote Device Management Software supports reliable management and programming of up to 10 devices.

Specifications

Server requirements
